

PYTHON PROGRAMMING COURSE

WEEK 1 – Python Basics & Control Structures

Focus:

Syntax, Variables, Loops, Conditional Statements, Functions.

Topics Covered:

- Print, Input, Data Types
- Operators, If-Else, Loops
- Functions & Modules
- String & List Manipulation

Assignments:

1. **Temperature Converter:**
Convert Celsius ↔ Fahrenheit using functions.
2. **Student Grade Calculator:**
Take marks as input, calculate average & assign grades.
3. **Even/Odd & Prime Number Checker.**

Mini Project (W1):

“Simple ATM Simulator”

- User login (PIN-based)
- Options: check balance, deposit, withdraw
- Use functions for each operation

Skill Gain: Loops, conditionals, modular programming.
